

Sublime™

HERBICIDE

Control of ground ivy and Oxalis in cool-season turf

Dr. Shawn Askew, Virginia Tech

Trial objective

- To determine the efficacy of Sublime for controlling ground ivy (*Glechoma hederacea*) and Oxalis (*Oxalis stricta*) in cool-season turf height lawns

Materials and methods

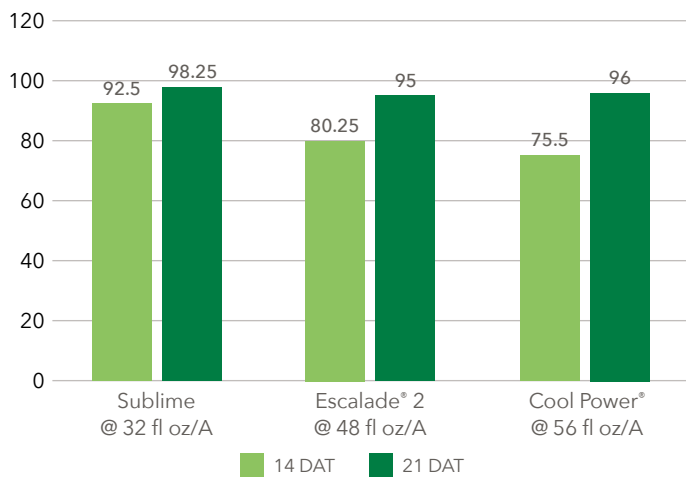

- Trials were initiated on June 14, 2021 and conducted at the Virginia Tech Turfgrass Research Center (Blacksburg, VA).
- The plots were laid out in four replications on a cool-season turfgrass blend.

- % weed control was recorded in each plot (0 = no control of broadleaf, 100 = complete control).

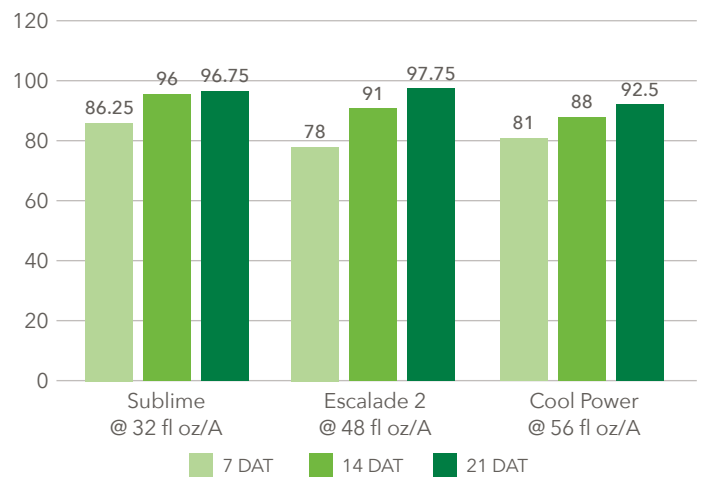

Trial results and conclusions

- Sublime provided the statistically fastest level of control against other herbicides.
- This unique combination works quickly with no bleaching symptoms observed.
- Sublime controls a variety of tough-to-control weeds.

% control ground ivy (Virginia Tech 2021)

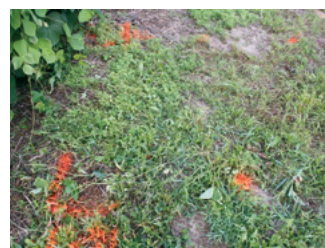

% control Oxalis (Virginia Tech 2021)

Ground ivy
